PENERAPAN ARSITEKTUR VERNAKULAR KE DALAM BANGUNAN PENDIDIKAN INTERNASIONAL TAMAN CIPTA KARYA NUSANTARA UNTUK PENCAPAIAN ARSITEKTUR EKOLOGIS

One effort that can be made to create people with integrity and quality is to improve the quality of education. The need for students with international quality education in the Special Region of Yogyakarta (DIY) is that students are expected to be able to compete and have a strong intellectual foundation. This professional work activity is carried out to try to make a real design by accommodating international educational needs. This is focused on providing physical building infrastructure to support the activities therein. By adding traditional Javanese elements to the building, it creates a good image in the philosophical packaging of an international scale educational building located in one of the areas in Yogyakarta. In designing this building design, the hope is to create an international school for the future. Both in terms of science and green building design. With this knowledge, it was created not to destroy nature, but to be able to create together with nature.

Keywords: Education, Traditional, Building
