PENGARUH PSIKOLOGIS MANUSIA TERHADAP INTERIOR KAYU PADA ELEMEN RUANG DALAM BANGUNAN SEKOLAH INTERNASIONAL YOGYAKARTA

As a student of architecture, professional work gives realistic job experience in the architectural sector. Practitioners work on real projects, developing a profound understanding of the demands and characteristics of the architectural environment. The work of the profession works to highlight daily difficulties, necessary abilities, and the relation between theoretical architectural concepts and their application in actual projects. Experiences from professional work offer insightful information about how well architecture students get ready for their future jobs and highlight the value of off-campus learning in fostering professional advancement in the architectural sector. The CV. Indonesian Design Palace is one of the locations where practitioners do their professional work activities.

While undertaking professional work activities at CV. Puri Design Indonesia, Practitioner works under the supervision and guidance of the planning and drafting division, Mr. Adrian Hartanto. In carrying out professional work, practitioners can participate in the implementation of international school development, such as: making working drawings for interior planning, selecting materials and furniture used in the interior of the international school. The activities that practitioners carry out in the planning and drafting division focus on creating interior planning working drawings. These activities include making room plans and pieces, plans and pieces of light point planning, plans and pieces of ceiling planning, and floor pattern plans. Apart from that, Practicing also helps create metadata for materials and furniture used at the international school.
