SOFTWARE QUALITY ASSURANCE AT KLIKDOKTER

The role of a Software Quality Assurance Engineer (SQA) at KlikDokter plays a central role in ensuring software quality for this leading digital health platform. SQA at KlikDokter is responsible for designing and implementing effective testing strategies to ensure that every aspect of the software product meets the highest quality standards. As an integral part of the development team, SQA plays a role in enforcing quality through the careful development of test scenarios and in-depth investigation of each software component. Close collaboration with the development team allows SQA to identify and address potential issues from the early stages of development, ensuring that the resulting final product meets security, performance and functionality standards
