METHODS FOR IMPLEMENTING BOTTOM STRUCTURE IN THE MARIOTT GELORA JAKARTA PALMERAH HOTEL PROJECT

Professional work carried out at the Marriott Gelora Jakarta Hotel Project. The project is a hotel owned by PT. SSP Sejahtera Properti, and implemented by PT. Indonesia Pondasi Raya, Tbk. In this professional work activity, practitioners directly carry out field observations. Practitioners pay attention to reviewing the implementation of the substructure and *testing* of piles. As a result of conducting this review, it is hoped that practitioners will be able to understand the method of implementing the lower structure.

Keywords: Hotel, *Test Pile* and Substructure
