DEVELOPMENT STAGE OF VISUALIZATION IN DEVELOPMENT PLANNING REGULATIONS

In this Professional Work Program, practitioners have the opportunity to work at PT ARKONIN. Practitioners are placed in the Architectural Division 1 where the projects carried out will soon be built or in the selection stage for cooperation. While working at PT ARKONIN, the practitioner is placed in a project that is in the stage of starting the project selection until the process is completed for sales. Practitioners are given the task of integrating a visualization process from PowerPoint to Rendering. A responsibility in this assignment must be carried out within the regulation given to get accurate results in the visualization process. The stages in the work are also often seen to be able to find out the mistakes made so that, it can facilitate the revision process that will be given. Through this Professional Work program, practitioners learn a lot in the field that is run by practitioners. Learning in every project given can hone the skills possessed by practitioners.
