

ABSTRACT

Salwa Ahmad Zanjabila (2020071047)

WEBSITE BASED SALES SYSTEM DESIGN USING LARAVEL 9

Professional work activities are carried out at PT Legospay Mitra Sejati. Professional work activities will take place from June 12 2023 to September 1 2023. The intern works as a full stack developer who is responsible for frontend and backend to create a website-based sales system using the PHP framework, namely Laravel 9 for PT Ayam Sri Lestari. PT Ayam Sri Lestari is a customer of PT Legospay Mitra Sejati who needs a sales system for their business. The stage of creating a website-based sales system consists of 2 stages, namely the planning and creation stages. At the planning stage, practitioners collect information on requirements to document, design integrated modeling language diagrams, and create wireframe designs. At the creation stage, the practitioner creates the application according to the documentation that was created at the planning stage. This professional work activity provides practitioners with knowledge and experience in creating a website-based application system. This activity also provides an overview for practitioners about the world of the technology industry.
