*In The use of information system technology in recording employee leave, which previously used Microsoft Excel or Microsoft Word, has several problems that will arise loss of data and irregularity of employee leave records which makes it difficult to create summaries for reporting purposes. In making it easier to record leave, a web-based application that can be accessed online with regular data storage can improve the leave recording process and make it easier and faster to create summaries or reports. The Leave Recording Application is a web-based leave management system that can be accessed online which can be used to manage employees in making leave requests and continue the process of approving requests made by employees and every data is properly recorded in the database. This application will speed up tracking every employee who is on leave quickly and can be accessed anywhere using PC, laptop and smartphone hardware.*
