IMPLEMENTATION OF INTEGRATED VENDOR REGISTRATION SYSTEM FOR EFFICIENCY TENDER PREQUALIFICATION PROCESS

The development of technology, especially information and communication technology, is growing rapidly. Technology growth is helpful for increasing efficieny to help work be completed optimally and quickly. In this internship report, the intern will explain the flow of developing an integrated vendor registration system for the tender prequalification efficiency process. This report will explain system development using the system development life cycle (SDLC) method, which includes five stages: planning, analysis, design, implementation, and maintenance. The aim of implementing this integrated vendor registration system is to improve the tender prequalification process by reducing the number of repeated registration processes and speeding up the procurement process.
