*Glass is a material that is often found nowadays because it is often found in building windows to prevent wind, dust and dirt from outside from entering the room without blocking the view of someone in the room. glass products aside from being windows, there are also indoor products such as flower vases, aquariums, or cutlery such as plates and glasses. the use of glass material was chosen because glass is quite resistant to all temperatures and can be stored for a very long time. because there is a lot of use of glass as a material today, of course there is also a lot of waste or remnants that are discarded or damaged which are scattered to many places and are really dangerous because sharp glass shards can injure and damage the surroundings*

**Keywords** : *Glass, accessory, Waste, Eco Product*
