The church, as a fellowship commissioned by God to work and serve in the world, must be a dynamic and active community, interacting and relating in all aspects of life, including social aspects. The Christian Ecumenical Church (GKO). The vision and mission of the General Chairman of the GKO Synod, Mr. Rev. Hermanus Laelu, reflect a commitment to expanding the church's impact, increasing the number of congregation members, and creating a more connected and responsive church to the congregation's needs. Technological developments, such as the use of websites, present new opportunities to expand reach and strengthen the bond between the church and its congregation. This study aims to design the user interface (UI) of the GKO website as an effective and responsive information medium for the congregation's needs. The research method used is a case study and analysis through interviews, observations, literature study, and user testing. The results show that a well-designed UI can enhance interaction and participation in church activities. The resulting website is designed to be more user-friendly and functional, meeting the needs of the GKO congregation.

Key words: *Website, GKO Synod, (UI) Design, Information*
