This research is motivated by the instability of the Indonesian economy caused by the Covid-19 pandemic which is closely related to managerial performance in facing complex economic challenges. The phenomenon that shows this fact is that the performance of state-owned banks for 2020 was not optimal. Based on survey results from the Indonesian Survey Institute (LSI), the majority of Indonesian people assess that economic conditions in Indonesia are still poor amidst the recovery from the Covid-19 pandemic. With this phenomenon, researchers conducted research with the aim of finding out the influence of the Implementation of Accounting Information Systems, Employee Performance and Environmental Uncertainty on Managerial Performance. This research used a primary method by distributing questionnaires to state-owned banks in DKI Jakarta with 100 respondents. The hypothesis in this study was tested using the multiple linear regression method. The results of the research show that accounting information systems, employee performance, and environmental proximity simultaneously influence managerial performance at state-owned banks in DKI Jakarta.

Keywords: Accounting Information Systems, Employee Performance, Environmental Uncertainty, Managerial Performance
