OVERVIEW OF WORK AS A RESEARCH ASSISTANT IN THE LABTANYA STUDIO

Unemployment is one of the major problems in Indonesia. The majority of unemployed people in Indonesia are Generation Z people aged between 15 and 24 years old. This high unemployment rate is due to the low level of education. This is one of the challenges for the government to reduce unemployment in Indonesia. The importance of mastering soft skills when entering the world of work makes educational institutions, especially universities, prepare their graduates to have the soft skills needed in the world of work. One way to develop and create superior and quality human resources is through the education they have. In addition, education is also one of the ways that can be used to improve the competencies possessed by students. The purpose of internship or Professional Work is that each student can apply the knowledge or competencies that have been learned during college and used directly when entering the world of work. The main task of the practitioner is to make pretest and posttest measuring instruments for waste management. Some additional tasks are being a co-facilitator of the RMS Goes to School Program, conducting mapping from CV LabTanya and observing the RMS Goes to School program. Practitioners implement several courses that are relevant to the tasks given such as Interview and Observation, Construction of Measuring Instruments, Environmental Psychology and Training.
