Cluster Facade Design Exploration: Modern Minimalist Design Approach for Aesthetics and Functionality

Planning and developing an area that focuses on improving the comfort of facilities is a crucial aspect in urban environmental design. In this project, the intern is given the opportunity to develop skills and imagination in a professional environment, where he/she is involved in the design of various area facilities, with a focus on the main project in the form of a cluster and clubhouse. Through this involvement, the intern learns a design method that prioritizes comfort, with an elegant minimalist design approach. This approach is implemented through the selection of simple but quality materials, as well as the use of a monochrome color palette that strengthens the elegant and modern concept of the facility. This experience aims not only to develop the intern's technical abilities in architectural design, but also to increase understanding of comfort elements in the context of a wider area.

Keywords: *Developing the Area, Prioritize Comfort, Simple But Quality.*
